

# Remote control and Dolphy® Training

## **Gamma radiation simulation system** *for training people using dose rate meters and site beacons*

- Ease of use: one single on/off switch and a sliding switch. 1<sup>st</sup> implementation < 1 minute
- Ergonomic: one-handed use, slide selector for blind use
- Realistic: statistical fluctuations around the set point
- **Compatible with Dolphy® Training and SAG-A training**

10/01/2017

## Application and use

The Remote control Training, together with the Dolphy® Training, enables to simulate radiation situations in order to train Dolphy® Evolution future users.

The ergonomics has been studied to give the Remote control Training a blind one-handed use. For this purpose, there are notches providing access to presets (0.001, 0.025, 1, 2, 99 mSv/h and saturation).

A vibrate mode also helps the trainer know the current value without looking at the Remote control Training screen.

## Technical characteristics

### Power supply

Battery life:  
Charging time:

### Remote control Training

34 h  
6 h (charge provided 12 V<sub>dc</sub>)

### Dolphy® Training

13 h

### Radio

Range:

40 m in open air

### Mechanical and environmental characteristics

Weight:  
Dimensions:

180 g  
150 x 50 x 32.4 mm

170 g  
120 x 65 x 22 mm

## Application option: SAG-A Training

By inserting the Dolphy® Training into the SAG-A beacon, the trainer can simulate dose rate rises, trigger alarms and observe the trainees' behavior.
